

NEXTEL SMART CONNECTION

Finally truly mobile working

Mobile working is more than reading emails on the train. Your co-workers want to be able to use all their files and applications irrespective of their device or location. Too dangerous, says IT. Too expensive, says Finance. And once it is installed, your users say: too complex. Until today. Nextel Smart Connection makes mobile work easy, affordable and safe.

Four unique advantages

▶ Easy for users

Your employees can log into your corporate network via Nextel Smart Connection using any device, from any location. Their password gives them access to all their applications and files. Moreover, they always have the most recent corporate data.

▶ Limited data traffic

Thanks to Nextel Smart Connection, your users do not have to install anything on their device. They connect to their programmes on the server via their browser. There is no need to download surplus data. That saves money on your mobile data plan.

▶ Easy for IT

Nextel Smart Connection is a secure web application that is available via the most recent version of every web browser. No complex VPN-connections, no client management, no device verification, etc. Moreover, the link with your applications is very easy.

▶ 100% Safe

Files are not exchanged in the Nextel Smart Connection environment, they are simply displayed on the screen. So your data is always safely protected. The reverse is also true: your network remains virus free.

Installation choices:

In the cloud

You want to use Nextel Smart Connection via Nextel's private cloud? Then we will provide the link to your applications from our cloud.

You'll enjoy smart advantages:

- fast start-up and minimal installation
